Building Strong Mentoring Relationships in Doctoral Education

February 11, 2009

12:00 to 1:30 pm

Tate Center, Room 137

FACULTY PRESENTERS

Dr. Jason Cantarella

Mathematics

Focus: Creating a learning community across the department to support positive mentoring relationships

Dr. James Nagel

English

Focus: Developing strategies to establish effective mentoring relationships with individual students

Dr. Thomas Reeves

Educational Psychology and Instructional Technology

Focus: Structuring the learning environment to foster strong student-faculty relationships

SHARING BEST PRACTICES FOR MENTORING DOCTORAL STUDENTS

This seminar, the third of four that are part of the Graduate School's initiative to optimize doctoral completion, will focus on the mentoring that students receive while completing their doctoral degree. A major factor in successful doctoral education is the quality of the relationship between the major professor and the student. When faculty members and students interact in a mutually respectful and task-oriented manner, both learning and the quality of doctoral research are maximized. Our faculty panelists will share principles and proven strategies for effective mentoring.
